

## Featured Antibody Categories

We currently offer 699,222 antibodies!

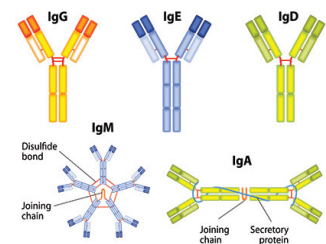

### Primary Antibodies

Choose from qualified antibodies for Immunology, Cancer, Epigenetics, etc... validated and guaranteed.

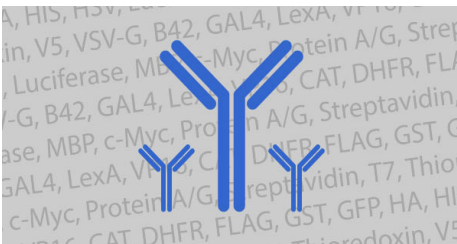

### Secondary Antibodies

Available in many formats and are useful in a wide range of applications, including Flow Cytometry, Immunocytochemistry and Western Blotting.

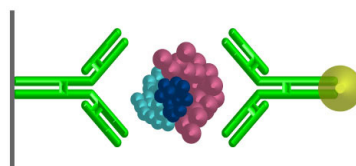

### Isotype Controls

Isotype controls are non-reactive immunoglobulins used as negative controls to help differentiate non-specific background signal from specific antibody signal.

### Epitope Tags

The use of epitope tags eliminates the need to generate a new antibody for each protein saving time, resources and money.

### Matched Pairs

Capable of detecting different epitopes on the same protein antigen, Monoclonal pairs, polyclonal antibody pairs, and hundreds of antibody-conjugate pairs have been validated in sandwich assays such as ELISA and lateral flow.

### Custom Antibodies

Antibodies are produced in a USDA certified animal research facility, and comply with the Animal Welfare Act. A typical standard protocol includes animal purchase, housing and care, all immunizations, bleeds per our standard protocol formats.
